

GRACE Technical Note 13

TITLE:

Monthly estimates of degree-1 (geocenter) gravity coefficients, generated from GRACE (04-2002 - 06/2017) and GRACE-FO (06/2018 onward) RL0603 solutions.

Last reported data point: 16-Sep-2025.

UPDATE HISTORY:

Created/updated 20-Nov-2025 18:57:55.

AUTHOR:

Felix Landerer, Jet Propulsion Laboratory (JPL)

Contact: grace@jpl.nasa.gov

REFERENCES:

Swenson, S., D. Chambers, and J. Wahr 2008 Estimating geocenter variations from a combination of GRACE and ocean model output, *J. Geophys. Res.*, 113, B08410, doi:10.1029/2007JB005338.

DESCRIPTION:

This file contains estimates of degree-1 gravity coefficients for the GRACE Release-06 data, based on ocean and atmospheric models and GRACE coefficients for degrees 2 and higher. The original method was developed by [Swenson et al., 2008], and subsequently expanded by [Sun et al., 2016] to include the effects of the barystatic sea level fingerprint (i.e.,

solving the sea level equation using land mass changes as measured by GRACE) in the ocean mass

contribution to degree-1.

The implementation for degree-1 coefficients below uses the optimal parameter values as described in [Sun et al., 2016]. These coefficients represent the degree 1 gravity coefficients that should be added to the GSM coefficients to correct for geocenter motion, relative to the modeled atmosphere and ocean degree 1 coefficients (e.g., GAC and GAD). The

coefficients have been normalized using the GRACE standards. Prior to the inversion for degree-1, GRACE-C20 has been replaced with the SLR-C20 (TN-14), and GIA has been corrected

with ICE6G-D.

To use for land applications or to compute global ocean mass, use these coefficients along with GRACE GSM coefficients for degrees 2 and higher, along with a Degree 1 Love number (k_1) = 0.021.

For ocean applications, add the degree 1 values found in the ocean bottom pressure product

(GAD) to these values. If you are interested in the full ocean, land, atmosphere geocenter, add the degree 1 values of the atmosphere/ocean product (GAC) to these values.

SPECIAL NOTES:

1) Reported values are derived from geopotential anomalies relative to GGM05C (epoch: 2008-01-01)

NOTE: A previous version from 04/2019 had an inconsistent epoch removed - please update all

data with the most recent version

2) The 1-sigma errors are based on Tab.1 of [Sun et al., 2016]

3) The native GRACE C20 coefficient has been replaced with SLR-C20 (TN-14v3)

4) GIA has been corrected for subtracting the ICE6G-D (Peltier et al., 2018) prior to the degree-1 inversion

5) From 06/2019 on, C30 in GRACE-FO has been replaced with SLR-C30 (TN-14v3)

FORMAT:

The data format is similar to that for GSM, GAD, and GAC files distributed by PODAAC, see GRACE Level-2 handbook for more information.
